

Asbestos Awareness

Objectives:

To provide recipients with evidence confirming their knowledge and understanding of dealing with asbestos as part of their normal work, to enable them to demonstrate a level of assurance to employers and clients.

To provide an understanding of the methods used to control the hazards of working near or with **Asbestos Containing Materials (ACM)**

Course Content:

- Attendees will appreciate the effects on long term health of asbestos fibres
- Attendees will be aware of the duties of the client to manage asbestos containing materials (ACM) in the building fabric and facilities and how these duties are carried out including the ACM register and information contained
- Awareness that some ACM has been missed in the survey and not all labelled and the course of action on finding suspected ACM during their activity
- Where ACM's can be found, their concentration of asbestos and their stability
- Techniques to minimise air borne asbestos
- Risk assessment and control measures for working with ACM
- Method statements for various work activities including protection for the public
- Syndicate exercise in preparation of risk assessment and method statement for various tasks
- Multi choice questions on understanding
