

Risk Assessment Workshop

Objectives:

This course addresses the methodology of Risk Assessment, the identification of hazards and the range of control measures to eliminate or reduce risk.

The course is designed to provide information on the risk assessment process, the systematic identification of hazards and the calculation of risk. This information will be reinforced with practical risk assessment to ensure delegates are competent and confident to carry out risk assessments in the workplace.

Course content:

On completion of the course delegates will:

- Understand the risk assessment process relevant to their own company
- Become familiar with the legal requirements for risk assessments
- Have an understanding of hazard and risk
- Gain the skills and confidence to carry out risk assessments in the workplace
- Understand the importance of selecting the correct control measures and implementing them
- Be able to fill in risk assessments forms
- Be able to create safe working procedure from the content of a risk assessment
- Risk assessments of the workplace (desk top exercise)
- Hierarchy of control measures
